

Eco Sud - Newsletter

Recent activities

- Cleaning activity marine park and beach of Blue Bay April 7th
- School children (Ecole de Beau Vallon, MDMT, Grand Bel Air, Riviere des creoles) visits to marine park in glass bottom boats
- Mangrove planting with schoolchildren in Pointe Jérôme and Rivière des Créoles
- Environmental survey conducted in Mahebourg about local opinion on concerns for marine life

Upcoming events

- Visit of eco guide from South Africa
- Evaluation sheets (on presentation, marine park visit and mangrove planting) distributed to schools

Item descriptions

Cleaning activity

Cleaning activity turned out to be a success though the activity had been kept simple. Students from England, AIESEC and our team members helped out to remove the pollution from the beach and in the sea. Need to reorganize this activity more often because the beaches are very polluted.

So next time, we need your help!

Survey in Mahebourg

A survey in Mahebourg has been conducted and showed surprising results. The people there are fed up that not much is being done about the pollution of the environment and the extinction of fish species and coral. This survey is a good tool to sensitize the authorities about the need to take action.

Educational information

Food chain

The food chain is a complex balance of life. All sea creatures rely on other sea creatures for food to survive. If one animal source of food disappears, such as from over fishing or destruction, many other animals in the food chain are impacted and may die. This is why it is so important to prevent illegal fishing because immature fish species will not get the chance to mature properly and lay eggs.

Cleaning activity at Blue Bay Marine Park

Example of a marine food chain

To do list!

- Distribute hotline
- Catch and release brochures
